

CIT-Care Full Regression Test Report

Project Information

- Project: CIT-Care
- Test date: 2026-05-09
- Tested by: Codex
- Scope: Backend Spring Boot API, React web frontend, available mobile test command
- Reason for testing: Full regression after vertical slice refactoring

Refactoring Summary

The backend was refactored from type-based packages into feature-oriented vertical slices:

- `auth`
- `appointments`
- `services`
- `admin`

The frontend was refactored into feature folders:

- `features/auth`
- `features/home`
- `features/appointments`

Shared backend persistence classes remain in `entity` and `repository` packages to avoid changing database mappings and data access contracts during this structural refactor.

Updated Project Structure

Backend:

```

```text
backend/citcare/citcare/src/main/java/edu/cit/abella/citcare
 admin/
 AdminController.java
 RoleUpdateRequest.java
 appointments/
 AppointmentController.java
 AppointmentRequest.java
 AppointmentService.java
 auth/
 AuthController.java
 AuthService.java
 CustomOAuth2UserService.java
 config/
 SecurityConfig.java
 entity/
 Appointment.java
 ServiceEntity.java
 User.java
 repository/
 AppointmentRepository.java
 ServiceRepository.java
 UserRepository.java
 services/
 ServiceController.java
 ServiceService.java
...

```

Frontend:

```

```text
web/citcare/src

```

```

features/
  appointments/
    BookingModal.jsx
    BookingModal.css
    __tests__/BookingModal.test.jsx
  auth/
    AuthSuccess.jsx
    Login.jsx
    Login.css
    Register.jsx
    Register.css
    __tests__/
  home/
    Home.jsx
    Home.css
    __tests__/Home.test.jsx
test/
  setupTests.jsx
App.jsx
main.jsx
` ``

```

Test Plan Documentation

The complete Software Test Plan is available at:

- `docs/TEST\_PLAN.md`

It includes functional requirements coverage, manual test cases, test steps, automated test cases, and command scripts.

Automated Test Evidence

Backend

Command:

```

` `` powershell
cd backend\citcare\citcare
cmd /c mvnw.cmd test
` ``

```

Result:

```

` `` text
Tests run: 13, Failures: 0, Errors: 0, Skipped: 0
BUILD SUCCESS
` ``

```

Coverage added:

```

- `AuthServiceTest`
- `AppointmentServiceTest`
- `ServiceServiceTest`
- `CitcareApplicationTests` using `test` profile and H2 database

```

Frontend Tests

Command:

```

` `` powershell
cd web\citcare
npm.cmd test
` ``

```

Result:

```
```text
Test Files 4 passed (4)
Tests 7 passed (7)
```
```

Coverage added:

```
- `Login.test.jsx`
- `Register.test.jsx`
- `BookingModal.test.jsx`
- `Home.test.jsx`
```

Frontend Lint

Command:

```
```powershell
cd web\citcare
npm.cmd run lint
```
```

Result:

```
```text
eslint completed with 0 errors
```
```

Frontend Build

Command:

```
```powershell
cd web\citcare
npm.cmd run build
```
```

Result:

```
```text
vite build completed successfully
50 modules transformed
```
```

Mobile Regression Check

Command:

```
```powershell
cd mobile
cmd /c gradlew.bat test
```
```

Result:

```
```text
Failed: Unable to access jarfile ...\\mobile\\gradle\\wrapper\\gradle-wrapper.jar
```
```

Notes:

- The mobile Gradle wrapper could not run from the current Unicode OneDrive path because the Java process resolved part of the path as `??`.
- No mobile source code changes were made during the vertical slice refactor.

- Mobile tests should be rerun from an ASCII-only path or after fixing the wrapper path issue.

Regression Test Results

| Area | Test Type | Result | Notes |
|---------------------------|-------------------|---------|--|
| Backend compilation | Automated | Passed | Maven compiled main and test sources. |
| Backend context startup | Automated | Passed | Uses H2 test profile instead of remote Supabase. |
| Backend auth | Automated | Passed | Registration, duplicate email, login, invalid credentials. |
| Backend appointments | Automated | Passed | Create, list by student, approve, reject. |
| Backend services | Automated | Passed | List, save, find by ID, missing service error. |
| Frontend auth | Automated | Passed | Login success/failure and registration success. |
| Frontend booking modal | Automated | Passed | Modal render, service option, submit behavior, closed state. |
| Frontend home/dashboard | Automated | Passed | Guest landing and authenticated appointment table. |
| Frontend lint | Automated | Passed | 0 ESLint errors after fixes. |
| Frontend production build | Automated | Passed | Vite build successful. |
| Mobile unit tests | Automated attempt | Blocked | Gradle wrapper path issue in Unicode OneDrive path. |

Issues Found

| Issue ID | Description | Severity | Status |
|----------|---|----------|--------|
| ISS-01 | Backend tests used production Supabase configuration and failed when remote tenant was unavailable. | High | Fixed |
| ISS-02 | Frontend test runner initially could not load Vite config inside sandbox path. Worked around by running with approved unrestricted command. | Medium | Fixed |
| ISS-03 | Vitest localStorage was not stable in the current environment. | Medium | Fixed |
| ISS-04 | Login test matched both manual sign-in and Google sign-in buttons. | Low | Fixed |
| ISS-05 | Booking modal test submit was blocked by required form fields. | Low | Fixed |
| ISS-06 | ESLint found unused `catch` parameters in Login and Register. | Low | Fixed |
| ISS-07 | ESLint found a React hooks warning in Home state initialization/fetch flow. | Medium | Fixed |
| ISS-08 | Mobile Gradle wrapper could not run from Unicode OneDrive path. environment issue | Medium | Open |

Fixes Applied

1. Added H2 test dependency to backend `pom.xml`.
2. Added `application-test.properties` for isolated backend tests.
3. Updated `CitcareApplicationTests` to use the `test` profile.
4. Added backend unit tests for `auth`, `appointments`, and `services` slices.
5. Installed and configured Vitest, Testing Library, jest-dom, and jsdom for frontend tests.
6. Added frontend automated tests for login, registration, home/dashboard, and booking modal.
7. Fixed frontend unused catch parameters.
8. Refined `Home.jsx` initialization and appointment loading to satisfy React lint rules.
9. Added stable test localStorage setup for Vitest.

Final Regression Status

Backend and web frontend regression testing passed after fixes.

Mobile regression execution is blocked by an environment path issue and should be rerun from an ASCII-only local path.
